

# **Assignment No :- 1**

## **Assignment Statement :-**

**Create the following table:**

Programmer(Pid varchar2(3),Name varchar2(30), Project varchar2(10), Language varchar2(10),Task\_No number, Salary number).

**Pid is the primary key of the above table .Also make sure that every Pid starts with 'P'.Enter the sufficient records.**

## **Creating table “Programmer”**

```
SQL> create table programmer(pid varchar2(3) primary key check(pid like 'P%'),name  
varchar2(30),project varchar2(10),language varchar2(10),task_no number(2),salary number(5));
```

Table created.

## **Inserting rows into the table “Programmer”**

```
SQL> insert into programmer values('P1','Susovan Das','MRC','Python',1,40000);
```

1 row created.

### **\* Check condition is violated**

```
SQL> insert into programmer values('r2','Rounak Bag','MRC','Python',1,40000);  
insert into programmer values('r2','Rounak Bag','MRC','Python',1,40000)
```

\*

ERROR at line 1:

ORA-02290: check constraint (SUSOVAN.SYS\_C004312) violated

### **\* Primary Key condition is violated**

```
SQL> insert into programmer values('P1','Rounak Bag','MRC','Python',1,40000);  
insert into programmer values('P1','Rounak Bag','MRC','Python',1,40000)
```

\*

ERROR at line 1:

ORA-00001: unique constraint (SUSOVAN.SYS\_C004313) violated

SQL> insert into programmer values('P2','Rounak Bag','MRC','Python',1,40000);

1 row created.

SQL> insert into programmer values('P3','Tirtharaj Majumdar','MRC','Python',1,40000);

1 row created.

SQL> insert into programmer values('P4','Sananda Dey','DBA','SQL',2,35000);

## The Queries:-

**Q1 :- Make sure that your table is properly created.**

### “Programmer” Table Structure

SQL> desc programmer;

| Name     | Null?    | Type         |
|----------|----------|--------------|
| -----    | -----    | -----        |
| PID      | NOT NULL | VARCHAR2(3)  |
| NAME     |          | VARCHAR2(30) |
| PROJECT  |          | VARCHAR2(10) |
| LANGUAGE |          | VARCHAR2(10) |
| TASK_NO  |          | NUMBER(2)    |
| SALARY   |          | NUMBER(5)    |

### “Programmer” Table Integrity Constraints

SQL> select constraint\_name,constraint\_type,search\_condition from user\_constraints where table\_name='PROGRAMMER';

| CONSTRAINT_NAME | C | SEARCH_CONDITION |
|-----------------|---|------------------|
| -----           | - | -----            |
| SYS_C004312     | C | pid like 'P%'    |
| SYS_C004313     | P |                  |

**Q2 :- Select all programmers who work for ‘MIS’ project using ‘VC++’ language.**

SQL> select \* from programmer where project='MIS' and language='VC++';

| PID | NAME          | PROJECT | LANGUAGE | TASK_NO | SALARY |
|-----|---------------|---------|----------|---------|--------|
| --- | -----         | -----   | -----    | -----   | -----  |
| P10 | Apurba Sarkar | MIS     | VC++     | 6       | 34000  |
| P11 | Suvojit Das   | MIS     | VC++     | 7       | 32500  |
| P14 | Puja Pal      | MIS     | VC++     | 10      | 34500  |
| P15 | Sanju Jana    | MIS     | VC++     | 10      | 33000  |

**Q3 :- Make the salaries of all the programmers working for 'EPR' project higher by 5%.**

SQL> update programmer set salary=(salary\*105/100) where project='EPR';

3 rows updated.

SQL> select \* from programmer where project='EPR';

| PID | NAME          | PROJECT | LANGUAGE | TASK_NO | SALARY |
|-----|---------------|---------|----------|---------|--------|
| P16 | Samriddha Pal | EPR     | Python   | 11      | 28350  |
| P17 | Tushar Saha   | EPR     | Ruby     | 11      | 27825  |
| P18 | Souvik Ghosh  | EPR     | C#       | 11      | 28875  |

**Q4 :- Display the list of all programmers in decreasing order of the task number assigned to them.**

SQL> select \* from programmer order by task\_no desc;

| PID | NAME            | PROJECT | LANGUAGE   | TASK_NO | SALARY |
|-----|-----------------|---------|------------|---------|--------|

# Assignment No :- 2

## Assignment Statement :-

Create the following table:

Employee (ID number, Name varchar2(30),Mid number, Title varchar2(15),DeptId varchar2(7),Salary number).

ID is the primary key of the above table. The salary of an employee should not be less than RS 5000/-.Enter the sufficient records.

## Creating table “Employee”

```
SQL> create table employee(id number(2) primary key,name varchar2(30),mid number(2),title varchar2(15),department varchar2(15),salary number(5) check(salary>=5000));
```

Table created.

## “Employee” Table Structure

```
SQL> desc employee;
```

| Name       | Null?    | Type         |
|------------|----------|--------------|
| -----      | -----    | -----        |
| ID         | NOT NULL | NUMBER(2)    |
| NAME       |          | VARCHAR2(30) |
| MID        |          | NUMBER(2)    |
| TITLE      |          | VARCHAR2(15) |
| DEPARTMENT |          | VARCHAR2(15) |
| SALARY     |          | NUMBER(5)    |

## “Employee” Table Integrity Constraints

```
SQL> select constraint_name,constraint_type,search_condition from user_constraints where table_name='EMPLOYEE';
```

| CONSTRAINT_NAME | C | SEARCH_CONDITION |
|-----------------|---|------------------|
| -----           | - | -----            |
| SYS_C004320     | C | salary>=5000     |
| SYS_C004321     | P |                  |

## Inserting rows into the table “Employee”

# Assignment No :- 3

## Assignment Statement :-

Create the following table:

Employee (ID number, Name varchar2(30),Mid number, Title varchar2(15),DepId varchar2(7),Salary number).

ID is the primary key of the above table. Enter sufficient records.

## Creating table “Employee”

```
SQL> create table employee(id number(2) primary key,name varchar2(30),mid number(2),title varchar2(15),depid varchar2(7),salary number(5));
```

Table created.

## “Employee” Table Structure

```
SQL> desc employee;
```

| Name   | Null?    | Type         |
|--------|----------|--------------|
| -----  | -----    | -----        |
| ID     | NOT NULL | NUMBER(2)    |
| NAME   |          | VARCHAR2(30) |
| MID    |          | NUMBER(2)    |
| TITLE  |          | VARCHAR2(15) |
| DEPID  |          | VARCHAR2(7)  |
| SALARY |          | NUMBER(5)    |

## Inserting rows into the table “Employee”

```
SQL> insert into employee values(1,'Priya Singh',10,'Opt Head','R and D',80000)
```

1 row created.

```
SQL>insert into employee values(2,'Sananda Dey',10,'Programmer','R and D',60000)
```

1 row created.

```
SQL>insert into employee values(3,'Kanisha Bosh',10,'Worker','R and D',40000)
```

1 row created.

```
SQL>insert into employee values(4,'Sumitra Patra',10,'Manager','R and D',65000)
```

1 row created.

22 rows selected.

## The Queries:-

**Q1 :-Display the average salary of each job title except the president in the alphabetical order of the title.**

SQL> select title,avg(salary) as average from employee group by title having title<>'President' order by title;

| TITLE      | average    |
|------------|------------|
| Manager    | 54166.6667 |
| Opt Head   | 65000      |
| Programmer | 60000      |
| Worker     | 38500      |

**Q2 :- Display the average salary of each manager where more then two persons work under that manager.**

SQL> select avg(salary) from (select salary,title from employee where depid in (select depid from employee group by depid having count(\*)>3)) where title='Manager';

| AVG(SALARY) |
|-------------|
| 52500       |

**Q3 :- Find the maximum and mini mum salaries for each department where there are more than two employees. Result is to be displayed in the order of department.**

SQL> select depid,max(salary),min(salary) from (select salary,depid from employee where depid in (select depid from employee group by depid having count(\*)>3)) group by depid order by depid;

| DEPID    | MAX(SALARY) | MIN(SALARY) |
|----------|-------------|-------------|
| Delivery | 45000       | 30000       |
| Market   | 58000       | 40000       |
| R and D  | 80000       | 40000       |
| Sales    | 55000       | 30000       |

**Q4 :- List the number of different manager ids present in the table.**

SQL> select count(\*) from employee where title='Manager';

```
COUNT(*)
-----
6
```

**Q5 :- Display the details of all the employees whose salary is greater than the average salary.**

SQL> select \* from employee where salary>(select avg(salary) from employee);

| ID | NAME             | MID | TITLE      | DEPID   | SALARY |
|----|------------------|-----|------------|---------|--------|
| 1  | Priya Singh      | 10  | Opt Head   | R and D | 80000  |
| 2  | Sananda Dey      | 10  | Programmer | R and D | 60000  |
| 4  | Sumitra Patra    | 10  | Manager    | R and D | 65000  |
| 5  | Susovan Das      | 11  | Worker     | HR      | 50000  |
| 7  | Bikram Majumdar  | 11  | Manager    | HR      | 55000  |
| 11 | Suporna Gupta    | 12  | Opt Head   | Sales   | 50000  |
| 12 | Sourav Das       | 13  | Manager    | Market  | 56000  |
| 14 | Tushar Shaha     | 13  | President  | Market  | 58000  |
| 16 | Aloknath Pradhan | 12  | President  | Sales   | 55000  |
| 17 | Bikas Sen        | 15  | Manager    | Account | 60000  |

**Q6 :- Find the employees with lowest salary without using any aggregate function.**

SQL> select \* from employee where id in (select id from employee minus ( select employee.id from employee,employee a where employee.salary>a.salary));

| ID | NAME         | MID | TITLE  | DEPID    | SALARY |
|----|--------------|-----|--------|----------|--------|
| 9  | Souvik Ghosh | 12  | Worker | Sales    | 30000  |
| 21 | Susanto Pal  | 19  | Worker | Delivery | 30000  |
| 22 | Kuntal Ghosh | 19  | Worker | Delivery | 30000  |

**Q7 :- Display the number of employees working under the supervision of the managers in the descending of the manager ids.**

SQL> select a.depid,a.count from employee,(select depid,count(\*) as count from (select depid from employee where title<>'Manager') group by depid) a where a.depid=employee.depid and employee.title='Manager' order by employee.id desc;

| DEPID    | COUNT |
|----------|-------|
| -----    | ----- |
| Delivery | 3     |
| Account  | 1     |
| Market   | 3     |
| Sales    | 4     |
| HR       | 2     |
| R and D  | 3     |

6 rows selected.

# **Assignment No :- 4**

## **Assignment Statement :-**

Create the following tables:

```
Employee(emp_id varchar2(6) , name varchar2(20), address varchar2(20) ,dep_id  
varchar2(6) ,salary number(5))  
Department(dep_id varchar2(6) ,name varchar2(20) ,reg_id varchar2(6))  
Region(reg_id varchar2(6) ,name varchar2(20))
```

In the above tables ,Id is the primary key. In the Employee table,Dep\_Id is the foreign key referencing the Department table where Reg\_Id is the foreign key referencing the Region table. Enter sufficient records in each of the above tables.

## **Creating table “Region”**

```
SQL> create table region(reg_id varchar2(6) primary key,name varchar2(20));
```

Table created.

## **“Region” Table Structure**

```
SQL> desc region;
```

| Name   | Null?    | Type         |
|--------|----------|--------------|
| -----  | -----    | -----        |
| REG_ID | NOT NULL | VARCHAR2(6)  |
| NAME   |          | VARCHAR2(20) |

## **Creating table “Department”**

```
SQL> create table department(dep_id varchar2(6) primary key,name varchar2(20),reg_id  
varchar2(6) references region(reg_id));
```

Table created.

## **“Department” Table Structure**

SQL> desc department;

## The Queries:-

**Q1 :-Display the details of all who work in the same department as Diptesh Acharya .**

SQL> select \* from employee where dep\_id=(select dep\_id from employee where name='Diptesh Acharya');

| EMP_ID | NAME            | ADDRESS   | DEP_ID | SALARY |
|--------|-----------------|-----------|--------|--------|
| E8     | Ankita Das      | Bangalore | D4     | 60000  |
| E9     | Susmita Pal     | Kolkata   | D4     | 50000  |
| E10    | Sandip Ghosh    | Kolkata   | D4     | 55000  |
| E11    | Diptesh Acharya | Mumbai    | D4     | 65000  |
| E12    | Kousik Sen      | Delhi     | D4     | 45000  |

**Q2 :-Find all employees who work in HR department .**

SQL> select \* from employee where dep\_id=(select dep\_id from department where name='HR');

| EMP_ID | NAME               | ADDRESS   | DEP_ID | SALARY |
|--------|--------------------|-----------|--------|--------|
| -----  | -----              | -----     | -----  | -----  |
| E5     | Tirtharaj Majumdar | Mumbai    | D3     | 60000  |
| E6     | Anish Jha          | Bangalore | D3     | 58000  |
| E7     | Anket Parui        | Bangalore | D3     | 50000  |

**Q3 :-Find total number of employees working in the Kolkata region .**

SQL> select count(\*) from employee,department where employee.dep\_id = department.dep\_id and department.reg\_id=(select reg\_id from region where name='Kolkata');

| COUNT(*) |
|----------|
| -----    |
| 7        |

**Q4 :-Display the name of the departments situated in Bangalore .**

SQL> select name from department where reg\_id in (select reg\_id from region where name='Bangalore');

| NAME       |
|------------|
| -----      |
| HR         |
| Management |

**Q5 :-Find the number of employees who work in the department where Anish works .**

SQL> select count(\*) from employee where dep\_id=(select dep\_id from employee where name like 'Anish %');

| COUNT(*) |
|----------|
| -----    |
| 3        |

**Q6 :-Find the department where more than 4 employees working .**

SQL> select name from department where dep\_id in (select dep\_id from employee group by dep\_id having count(\*)>4);

NAME

-----

Sales

**Q7 :- Find the department where maximum employees working .**

SQL> select name from department where dep\_id in (select dep\_id from employee group by dep\_id having count(\*)=(select max(count(\*)) from employee group by dep\_id));

NAME

-----

Sales

# Assignment No :- 5

## Assignment Statement :-

Create the following tables:

Customer(id varchar2(3) , name varchar2(20) , address varchar2(25),it\_id varchar2(5)),  
Item(it\_id varchar2(5) ,name varchar2(15),price number(6,2),qty number(2)),

In each of the above tables ,Id is the primary key. In the Customer table,It\_Id is the foreign key referencing the Item table. The default initial value of the quantity of each item is 5. Enter the sufficient records in each of the above tables.

## Creating table “Item”

SQL> create table item(it\_id varchar2(5) primary key,name varchar2(15),price number(6,2),qty number(2) default 5);

Table created.

## “Item” Table Structure

SQL> desc item;

| Name  | Null?    | Type         |
|-------|----------|--------------|
| ----- | -----    | -----        |
| IT_ID | NOT NULL | VARCHAR2(5)  |
| NAME  |          | VARCHAR2(15) |
| PRICE |          | NUMBER(6,2)  |
| QTY   |          | NUMBER(2)    |

## Creating table “Customer”

SQL> create table customer(id varchar2(3) primary key , name varchar2(20) , address varchar2(25),it\_id varchar2(5) references item(it\_id));

Table created.

## **“Customer” Table Structure**

SQL> desc customer;

| Name    | Null?    | Type         |
|---------|----------|--------------|
| -----   | -----    | -----        |
| ID      | NOT NULL | VARCHAR2(3)  |
| NAME    |          | VARCHAR2(20) |
| ADDRESS |          | VARCHAR2(25) |
| IT_ID   |          | VARCHAR2(5)  |

## **Inserting rows into the table “Item”**

SQL> insert into item values('i1','Scanner',6500.30,6);

1 row created.

### **\* Primary Key condition is violated**

SQL> insert into item values('i1','Printer',4900.58,7);

insert into item values('i1','Printer',4900.58,7)

\*

## The Queries:-

**Q1 :- Delete the items which have not been order by any customer.**

SQL> delete item where it\_id in(select it\_id from item minus (select it\_id from customer));

1 row deleted.

SQL> select \* from item;

| IT_ID | NAME      | PRICE   | QTY   |
|-------|-----------|---------|-------|
| ----- | -----     | -----   | ----- |
| i2    | Printer   | 4900.58 | 7     |
| i3    | DVD       | 75      | 45    |
| i4    | Joystick  | 1200.65 | 8     |
| i5    | Pen drive | 675     | 17    |
| i6    | Hard disk | 4500    | 6     |

**Q2 :- Find all the different items ordered by all the customer.**

SQL> select customer.name,item.name as item\_name from customer,item where customer.it\_id=item.it\_id;

| NAME             | ITEM_NAME |
|------------------|-----------|
| -----            | -----     |
| Priya Singh      | Joystick  |
| Puja Singh       | Joystick  |
| Sananda Dey      | DVD       |
| Kanisha Bose     | DVD       |
| Susovan Das      | Hard disk |
| Saurav Saha      | Pen drive |
| Shuvendu Patra   | DVD       |
| Bikram Mukherjee | Printer   |
| Rohan Bhandari   | DVD       |
| Awadhesh Yadav   | Hard disk |
| Rohit Chettri    | Pen drive |
| Nikita Agarwal   | Joystick  |
| Reshma Nandi     | Hard disk |
| Anita Das        | DVD       |
| Rohan Singh      | Printer   |
| Maya Singh       | Joystick  |

### Q3 :- Reduce the price of the most demanding items by 10%.

```
SQL> update item set price=(price-(price*10)/100) where it_id in(select it_id from customer
group by it_id having count(*)=(select max(count(*)) from customer group by it_id));
```

1 row updated.

```
SQL> select * from item;
```

| IT_ID | NAME      | PRICE   | QTY   |
|-------|-----------|---------|-------|
| ----- | -----     | -----   | ----- |
| i2    | Printer   | 4900.58 | 7     |
| i3    | DVD       | 67.5    | 45    |
| i4    | Joystick  | 1200.65 | 8     |
| i5    | Pen drive | 675     | 17    |
| i6    | Hard disk | 4500    | 6     |

### Q4 :- Display the items along with their available quantities in the ascending order by the price list.

```
SQL> select name,qty from item order by price;
```

| NAME      | QTY   |
|-----------|-------|
| -----     | ----- |
| DVD       | 45    |
| Pen drive | 17    |
| Joystick  | 8     |
| Hard disk | 6     |
| Printer   | 7     |

### Q5 :- Find the name of all the customers who have bought 'DVD'.

```
SQL> select * from customer where it_id=(select it_id from item where name='DVD');
```

| ID  | NAME           | ADDRESS   | IT_ID |
|-----|----------------|-----------|-------|
| --- | -----          | -----     | ----- |
| c3  | Sananda Dey    | Kolkata   | i3    |
| c4  | Kanisha Bose   | Kolkata   | i3    |
| c7  | Shuvendu Patra | Bangalore | i3    |
| c9  | Rohan Bhandari | Panaji    | i3    |
| c14 | Anita Das      | Mumbai    | i3    |

**Q6 :- Display all the customers from Kolkata who have bought at least one Joystick.**

SQL> select \* from customer where address='Kolkata' and it\_id=(select it\_id from item where name='Joystick');

| ID  | NAME        | ADDRESS | IT_ID |
|-----|-------------|---------|-------|
| --- | -----       | -----   | ----  |
| c1  | Priya Singh | Kolkata | i4    |
| c2  | Puja Singh  | Kolkata | i4    |

# Assignment No :- 6

## Assignment Statement :-

Design the Student- attendance System that automates the attendance system of the College. The system maintains the following database:

Students(Roll,SName,Course,Year)  
Teacher(Tid,TName,Code)  
Attends(Roll,Tid, Subject, DT\_class)

Create the tables using SQL such that if the student record is deleted, all corresponding records in the Attends table also gets deleted. Insert at least six topless in each table so that queries yield some results. 'SName' can start with letters A to D.

## Creating table "Student"

```
SQL> create table student(roll varchar2(4) primary key,sname varchar2(20) check(sname between 'A' and 'E'),course varchar2(10),year varchar2(5));
```

Table created.

## "Student" Table Structure

```
SQL> desc student;
```

| Name   | Null?    | Type         |
|--------|----------|--------------|
| -----  | -----    | -----        |
| ROLL   | NOT NULL | VARCHAR2(4)  |
| SNAME  |          | VARCHAR2(20) |
| COURSE |          | VARCHAR2(10) |
| YEAR   |          | VARCHAR2(5)  |

## "Student" Table Integrity Constraints

```
SQL> select constraint_name,constraint_type,search_condition from user_constraints where table_name='STUDENT';
```

| CONSTRAINT_NAME | C | SEARCH_CONDITION          |
|-----------------|---|---------------------------|
| -----           | - | -----                     |
| SYS_C004635     | C | sname between 'A' and 'E' |
| SYS_C004636     | P |                           |

## **Creating table “Teacher”**

SQL> create table teacher(tid varchar2(4) primary key,tname varchar2(20),code varchar2(10));

Table created.

### **“Teacher” Table Structure**

SQL> desc teacher;

| Name  | Null?    | Type         |
|-------|----------|--------------|
| ----- | -----    | -----        |
| TID   | NOT NULL | VARCHAR2(4)  |
| TNAME |          | VARCHAR2(20) |
| CODE  |          | VARCHAR2(10) |

## **Creating table “Attends”**

SQL> create table attends(roll varchar2(4) references student(roll) on delete cascade,tid varchar2(4) references teacher(tid),subject varchar2(10),dt\_class date);

Table created.

### **“Attends” Table Structure**

SQL> desc attends;

| Name     | Null? | Type         |
|----------|-------|--------------|
| -----    | ----- | -----        |
| ROLL     |       | VARCHAR2(4)  |
| TID      |       | VARCHAR2(4)  |
| SUBJECT  |       | VARCHAR2(10) |
| DT_CLASS |       | DATE         |

## **“Attends” Table Integrity Constraints**

```
SQL> select constraint_name,constraint_type,search_condition from user_constraints where  
table_name='ATTENDS';
```

| CONSTRAINT_NAME | C | SEARCH_CONDITION |
|-----------------|---|------------------|
| -----           | - | -----            |
| SYS_C004638     | R |                  |

## The Queries:-

### **Q1 :- Find students with maximum attendance.**

SQL> select sname from student where roll in(select roll from attends group by roll having count(\*) = (select max(count(\*)) from attends group by roll));

SNAME

-----

Anita Das

Dipak Pal

### **Q2 :- Find all students whose name start with 'A' in B.sc course who have attend at least one class taken by Prof M.Banerjee .**

SQL> select \* from student where sname like 'A%' and course='B.sc' and roll in(select roll from attends where tid in(select tid from teacher where tname like 'M% Banerjee'));

| ROLL | SNAME      | COURSE | YEAR |
|------|------------|--------|------|
| ---- | -----      | -----  | ---- |
| 1    | Anita Das  | B.sc   | 1st  |
| 2    | Aniket Das | B.sc   | 1st  |

### **Q3 :- Find teaches who have taught classes on Data St.**

SQL> select tname from teacher where tid in(select tid from attends where subject='Data St');

TNAME

-----

Samir Malakar

Arijit Jana

### **Q4 :- Find teaches who have taught classes on Math & Comp.Sc.**

SQL> select tname from teacher where tid in(select tid from attends where subject='Comp.Sc' intersect(select tid from attends where subject='Math'));

TNAME

-----  
Samir Malakar

## User Interface:-

- Login to the system. Only a teacher with a valid 'tid' and 'code' can login.
- Design a separate form to change code. Make sure that only a valid user can change code.
- Insert, view, update and delete 'Attends' data in a form.
- In the 'Attends' form, include three horizontal scrollbar, labeled as 'Red', 'Blue' and 'Green' whose values range from 0 to 255. An user may choose from these scrollbars to change the background color of the form.

## Form1 (Login page) User Interface:-

### Form1's Source Code :-

**' This is the check button program**

```
Private Sub Command1_Click()
```

```
Adodc1.RecordSource = "select * from teacher where tid='" & Text1.Text & "' and code ='" & Text2.Text & "'"
```

```
Adodc1.CursorLocation = adUseClient
```

```
Adodc1.Refresh
```

```
If Adodc1.Recordset.RecordCount > 0 Then
```

```
Form2.Show
```

```
Unload Me
```

```
Else
```

```
MsgBox "Login incorrect", vbCritical, "Error"
```

```
Text2.Text = ""
```

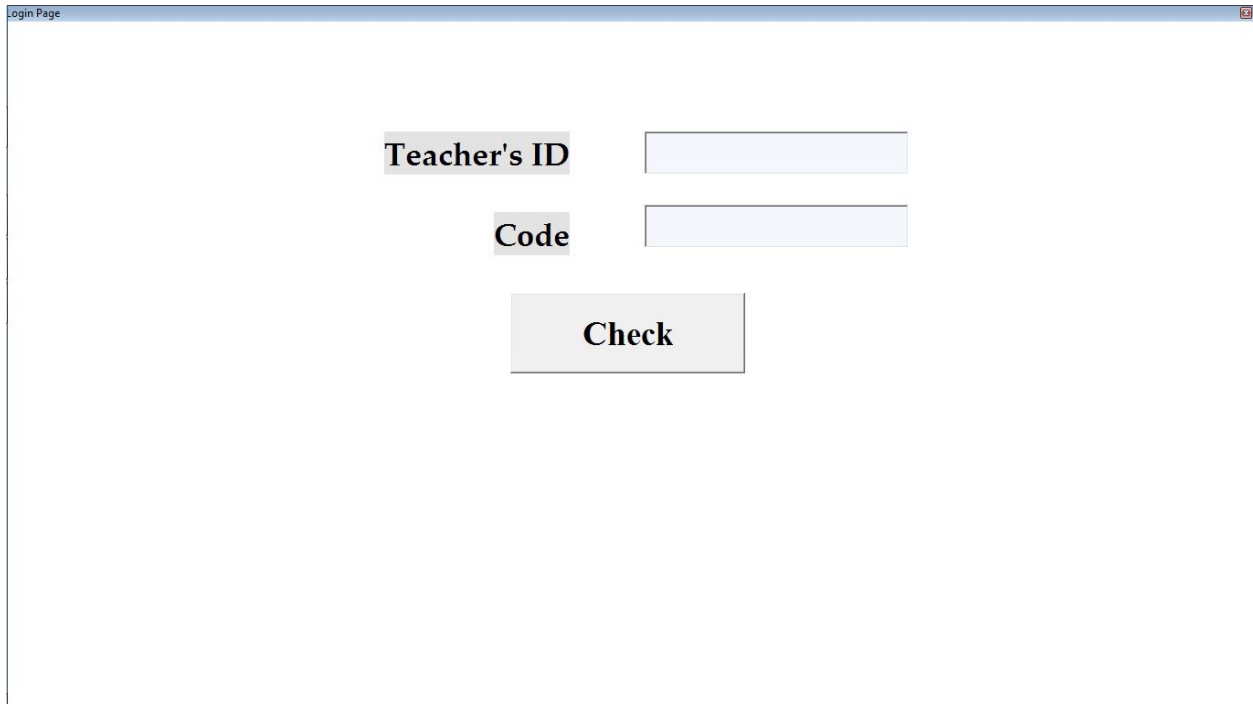

```
Text1.Text = ""
```

```
Text1.SetFocus
```

```
End If
```

```
End Sub
```

## **Form1 Look:-**

The screenshot shows a Windows-style window titled "Login Page". Inside the window, there are two text input fields. The first field is preceded by the label "Teacher's ID" and the second by the label "Code". Below these two fields is a single button labeled "Check".

## **Form2 (Teacher table update page) User Interface:-**

### **Form2's Source Code:-**

**' This is the Update button program**

```
Private Sub Command1_Click()  
    Adodc1.RecordSource = "select * from teacher where tid='" & Text1.Text & ""  
    Adodc1.CursorLocation = adUseClient  
    Adodc1.Refresh  
    If Adodc1.Recordset.RecordCount > 0 Then  
        If MsgBox("Do You Want to Update [Y/N]", vbYesNo) = vbYes Then  
            Adodc1.RecordSource = "select * from teacher"  
            Adodc1.Refresh  
            Adodc1.Recordset.Update "code", Text2.Text  
            MsgBox "Update Successful", vbInformation, "Successful"  
        End If  
    Else  
        MsgBox "Wrong Tid", vbCritical, "Error"  
    End If  
    Text1.Text = ""
```

```
Text2.Text = ""
Text1.SetFocus
End Sub
```

## **Form2 Look:-**

The screenshot shows a Windows-style window titled "Teacher\_table\_User\_Interface". Inside the window, there are two text input fields. The first field is preceded by the label "Teacher's ID". The second field is preceded by the label "Code". Below these two fields, centered, is a button with the text "UPDATE".

## **Form3 (Attends table page) User Interface:-**

### **Form3's Source Code:-**

**' This is the Inset button program**

```
Private Sub Command1_Click()
Adodc1.CursorLocation = adUseClient
Adodc1.Refresh
Adodc1.Recordset.AddNew
Adodc1.Recordset.Fields("ROLL").Value = Text1.Text
Adodc1.Recordset.Fields("tid").Value = Text2.Text
Adodc1.Recordset.Fields("subject").Value = Text3.Text
Adodc1.Recordset.Fields("DT_class").Value = DTPicker1.Value
Adodc1.Recordset.Update
MsgBox "Insert Susccessfull", vbInformation, "INSERTION"
```

```

Text1.Text = ""
Text2.Text = ""
Text3.Text = ""
Text1.SetFocus
End Sub

```

**‘ This is the View button program**

```

Private Sub Command2_Click()
Adodc1.CursorLocation = adUseClient
Adodc1.Refresh
DataGrid1.Visible = True
End Sub

```

**‘ This is the Update button program**

```

Private Sub Command3_Click()
Adodc1.CursorLocation = adUseClient
Adodc1.Refresh
Adodc1.Recordset.AddNew
Adodc1.Recordset.Fields("ROLL").Value = Text1.Text
Adodc1.Recordset.Fields("tid").Value = Text2.Text
Adodc1.Recordset.Fields("subject").Value = Text3.Text
Adodc1.Recordset.Fields("DT_class").Value = DTPicker1.Value
Adodc1.Recordset.Update
MsgBox "Update Successfull", vbInformation, "UPDATETION"
Text1.Text = ""
Text2.Text = ""
Text3.Text = ""
Text1.SetFocus
End Sub

```

**‘ This is the Delete button program**

```

Private Sub Command4_Click()
If MsgBox("Do you want to delete?", vbYesNo + vbCritical, "CONFORMATION") = vbYes Then
Adodc1.Recordset.Delete
MsgBox "DELETED SUCCESSFULLY"
End If
End Sub

```

**‘ This is the Form3’s load time program**

```

Private Sub Form_Load()
Form3.BackColor = RGB(HScroll1.Value, HScroll2.Value, HScroll3.Value)
DTPicker1.Value = Date
End Sub

```

**‘ This is the Red Horizontal Scroll bar program**

```
Private Sub HScroll1_Change()
```

```
Form3.BackColor = RGB(HScroll1.Value, HScroll2.Value, HScroll3.Value)
```

```
End Sub
```

**‘ This is the Green Horizontal Scroll bar program**

```
Private Sub HScroll2_Change()
```

```
Form3.BackColor = RGB(HScroll1.Value, HScroll2.Value, HScroll3.Value)
```

```
End Sub
```

**‘ This is the Blue Horizontal Scroll bar program**

```
Private Sub HScroll3_Change()
```

```
Form3.BackColor = RGB(HScroll1.Value, HScroll2.Value, HScroll3.Value)
```

```
End Sub
```

## **Form3 Look:-**

# **Assignment No :- 7**

## **Assignment Statement :-**

Create a region wise Employee database system where an employee must work in a particular department and the respective department must be located in a particular region.

Here is the given entities and the given relations.

Employee (EID,Name,Address,Did,Salary)

Department (Did,DName,RId)

Region (Rid, RName)

## **Creating table “Region”**

```
SQL> create table region(rid varchar2(6) primary key,rname varchar2(20));
```

Table created.

## **“Region” Table Structure**

```
SQL> desc region;
```

| Name  | Null?    | Type         |
|-------|----------|--------------|
| ----- | -----    | -----        |
| RID   | NOT NULL | VARCHAR2(6)  |
| RNAME |          | VARCHAR2(20) |

## **Creating table “Department”**

```
SQL> create table department(did varchar2(6) primary key,dname varchar2(20),rid varchar2(6) references region(rid));
```

Table created.

## **“Department” Table Structure**

SQL> desc department;

| Name  | Null?    | Type         |
|-------|----------|--------------|
| ----- | -----    | -----        |
| DID   | NOT NULL | VARCHAR2(6)  |
| DNAME |          | VARCHAR2(20) |
| RID   |          | VARCHAR2(6)  |

## **Creating table “Employee”**

SQL> create table employee(eid varchar2(6) primary key,name varchar2(20),address varchar2(20),did varchar2(6) references department(did),salary number(5));

Table created.

## **“Employee” Table Structure**

SQL> desc employee;

| Name    | Null?    | Type         |
|---------|----------|--------------|
| -----   | -----    | -----        |
| EID     | NOT NULL | VARCHAR2(6)  |
| NAME    |          | VARCHAR2(20) |
| ADDRESS |          | VARCHAR2(20) |
| DID     |          | VARCHAR2(6)  |
| SALARY  |          | NUMBER(5)    |

## **Inserting rows into the table “Region”**
